Uniswap V4		1,615	5.22	30,769,223
All AMMs		41,701	89.16	540,280,836
<i>Panel C. Ancillary raw-stream records</i>				
AMM		Daily pool states	Hourly reserve states	LP events
Uniswap V1		2,858,574	0	0
Curve		337,954	0	0
Uniswap V2		7,667,809	38,586,716	0
SushiSwap V2		789,008	4,309,490	0
Balancer		221,777	0	0
Uniswap V3		2,820,300	0	5,806,387
SushiSwap V3		35,359	0	0
Fluid		12,994	0	0
Uniswap V4		722,673	0	1,040,687
All AMMs		15,466,448	42,896,206	6,847,074
<i>Notes:</i> Counts describe persisted raw source records through 2026-06-30. Positive-swap days are AMM-days and are summed in the total row. Compressed GB uses decimal gigabytes; raw-file counts exclude metadata sidecars. Daily and hourly states are pool-day and pair-hour records, respectively. LP events combine fetched Uniswap V3 mints and burns with Uniswap V4 liquidity modifications. The all-record total therefore combines distinct raw observation units. For Uniswap V1, one swap-source record is a transaction row that can contain multiple purchase events.
