

| Component or estimate                                                              | Estimate [pp] | Obs.    |
|------------------------------------------------------------------------------------|---------------|---------|
| <i>Panel A. Route-count share: market activity and vehicle incidence</i>           |               |         |
| Endpoint pairs entering or leaving the sample                                      | +9.8          |         |
| Endpoint pairs gaining or losing a vehicle route                                   | −0.4          |         |
| Market activity shifting across continuing endpoint pairs                          | +7.9          |         |
| Change in how often continuing endpoint pairs use a vehicle                        | +7.0          |         |
| Stablecoin share within continuing vehicle-using endpoint pairs                    | +1.3          |         |
| Total route-count change                                                           | +25.7         |         |
| <i>Panel B. Route-count share: continuing and year-specific endpoint pairs</i>     |               |         |
| Net stablecoin-share change within continuing endpoint pairs                       | −0.1          |         |
| Pairs moving toward stablecoins (1,575)                                            | +1.3          |         |
| Pairs moving toward native assets (1,489)                                          | −1.4          |         |
| Vehicle activity shifting across continuing endpoint pairs                         | +8.6          |         |
| Weight of continuing versus year-specific endpoint pairs                           | −0.5          |         |
| Endpoint pairs traded in only one year                                             | +17.8         |         |
| Total route-count change                                                           | +25.7         |         |
| <i>Panel C. Dollar-weighted share: continuing and year-specific endpoint pairs</i> |               |         |
| Net stablecoin-share change within continuing endpoint pairs                       | 0.0           |         |
| Pairs moving toward stablecoins (1,511)                                            | +2.3          |         |
| Pairs moving toward native assets (1,445)                                          | −2.4          |         |
| Vehicle activity shifting across continuing endpoint pairs                         | +26.2         |         |
| Weight of continuing versus year-specific endpoint pairs                           | −2.5          |         |
| Endpoint pairs traded in only one year                                             | +19.2         |         |
| Total change in dollar-weighted share                                              | +42.8         |         |
| <i>Panel D. Matched ordered endpoint-pair estimates</i>                            |               |         |
| All two-leg routes, count share                                                    | +0.22 (0.76)  | 188,520 |
| 20% agreement sample, count share                                                  | +0.32 (0.75)  | 182,834 |
| 20% agreement sample, dollar-weighted share                                        | −1.35 (2.19)  | 182,834 |
