

Variable / proxy	Level	Construction	Source	Used for
VehicleShare	vehicle token x day	USD volume of indirect routes where token v is an intermediate divided by total indirect-route USD volume that day.	data/empirical/bridge_daily_routes	RQ1, RQ2, RQ3, RQ4
RouteCostAdvantage	endpoint pair x vehicle x day x trade size	(vehicle-route exact-quote output USD - direct-route exact-quote output USD) / direct-route output USD; reported in bps as 10000 x advantage. Main core panel uses the median bps across endpoint pairs at \$10k.	data/empirical/routes_exact_quote_output	RQ1, RQ3, RQ5
DirectAvailable	endpoint pair x day x trade size	Indicator that the exact-quote engine finds a direct executable route for the endpoint pair at the standard notional.	data/empirical/routes_exact_quote_output	RQ1, RQ5
VehicleAvailable	endpoint pair x vehicle x day x trade size	Indicator that both legs through candidate vehicle v are exact-quote executable at the standard notional.	data/empirical/routes_exact_quote_output	RQ1, RQ5
DirectDepth	endpoint pair x day x trade size	Executable direct-route quality proxy: direct output USD divided by trade size. Thin-direct cells are direct-available cells with output below 90% of notional.	data/empirical/routes_exact_quote_output	RQ1, RQ5
VehicleLinkedLiquidity	vehicle token x day	USD TVL in Uniswap V3 pools whose vehicle-side/base asset is candidate v, after excluding absurd pool TVL outliers.	data/exhibits/lp_concentration	RQ2, RQ3, RQ6
LPConcentration	vehicle token x day	VehicleLinkedLiquidity divided by total vehicle-candidate linked liquidity across the vehicle set that day.	data/exhibits/lp_concentration	RQ2, RQ3
LPRepositioning	vehicle token x day	Daily gross/net V3 mint-burn liquidity movement assigned to candidate vehicle pools; near-price variants use the active/near tick state where available.	data/empirical/_lp_repositioning_daily	RQ3, RQ5
Stress	day or event day	Positive part of negative WETH log return from stablecoin-implied WETH prices; event tables use selected large downside days.	bridge_daily WETH price; output/empirical/stress_event_definition	RQ4
SettlementTransferIncidence	vehicle token x day route unit	Indicator that the transaction receipt contains at least one ERC-20 Transfer log matching the intermediate vehicle token.	data/empirical/v4_settlement_transfer_logs	RQ6
NettingExposure	vehicle token	One minus V4 SettlementTransferIncidence for vehicle v in the receipt-audited V4 route-unit sample.	output/empirical/p4_netting_exposure	RQ6
VehicleLiquidityFactor	vehicle token x day	Leave-one-out average daily log-liquidity change among other pools linked to the same vehicle; paired with a leave-one-out market liquidity factor.	constructed from raw daily pool snapshots	RQ7
