

Notation	Observation-table column	Unit	Construction
<i>Panel A. Vehicle-use measures</i>			
$\text{BridgeShare}_{k,t}$	<code>bridge_share</code>	candidate vehicle token x day	USD volume of indirect routes whose intermediate token is k divided by total indirect-route USD volume on day t.
$\text{AllRouteBridgeShare}_{k,t}$	<code>all_route_bridge_share</code>	candidate vehicle token x day	USD volume of routes whose intermediate token is k divided by total route USD volume on day t.
$\text{BridgeCountShare}_{k,t}$	<code>bridge_count_share</code>	candidate vehicle token x day	Number of indirect route units whose intermediate token is k divided by total indirect route-unit count on day t.
$\text{PairCoverage}_{k,t}$	<code>pair_coverage</code>	candidate vehicle token x day	Share of active endpoint pairs on day t for which k appears as an intermediate token in at least one indirect route.
$\text{MainVehiclePairShare}_{k,t}$	<code>pair_main_vehicle_share</code>	candidate vehicle token x day	Share of active endpoint pairs for which k is the largest intermediate vehicle by realized indirect-route USD volume on day t.
$\text{BridgeVolume}_{k,t}$	<code>bridge_volume_usd</code>	USD, candidate vehicle token x day	USD volume of indirect routes whose intermediate token is k on day t.
<i>Panel B. Network and route-denominator controls</i>			
$\text{VShare}_{k,t}$	<code>vshare</code>	candidate vehicle token x day	Token k's total in-route plus out-route USD volume divided by total token volume in the daily route network.
$\text{Betweenness}_{k,t}$	<code>betweenness_centrality</code>	candidate vehicle token x day	Daily route-network betweenness centrality for token k.
$\text{Betweenness}_{k,t}^V$	<code>volume_weighted_betweenness</code>	candidate vehicle token x day	Daily USD-volume-weighted route betweenness centrality for token k.
AllRouteVolume_t	<code>daily_all_route_volume_usd</code>	day	Total USD route volume across direct and indirect route units on day t.
$\text{IndirectRouteVolume}_t$	<code>daily_indirect_route_volume_usd</code>	day	Total USD volume in indirect route units on day t.
$\text{IndirectRouteShare}_t$	<code>indirect_route_share</code>	day	Indirect-route USD volume divided by total route USD volume on day t.
<i>Panel C. Liquidity measures</i>			
$\text{VehicleLiquidity}_{k,t}$	<code>vehicle_linked_liquidity_usd</code>	USD, candidate vehicle token x day	USD TVL in Uniswap V3 pools linked to candidate vehicle k after filtering subgraph TVL outliers.
$\text{LPConc}_{k,t}$	<code>lp_concentration</code>	candidate vehicle token x day	Vehicle-linked liquidity for k divided by total vehicle-linked liquidity across the candidate vehicle set on day t.
$\log(1 + \frac{\text{log_vehicle_liquidity}_{k,t}}{\text{log_vehicle_liquidity}_{k,t}})$	<code>linked_liquidity</code>	candidate vehicle token x day	Natural log of one plus vehicle-linked liquidity in USD.
<i>Panel D. Route-cost opportunity measures</i>			
$\text{Pr}(D_{ijqt})$	<code>direct_available_share</code>	candidate vehicle token x day	Share of endpoint-pair quote rows for which the direct route is executable at the main trade size.
$\text{Pr}(V_{ijkqt})$	<code>vehicle_available_share</code>	candidate vehicle token x day	Share of endpoint-pair quote rows for which both legs through k are executable at the main trade size.
$\text{Pr}(\neg D_{ijqt}, V_{ijkqt})$	<code>no_direct_vehicle_available_share</code>	candidate vehicle token x day	Share of endpoint-pair quote rows with no executable direct route but an executable route through k.
$\Delta \text{Cost}_{ijkqt}$	<code>route_cost_advantage_median_bps</code>	basis points, candidate vehicle token x day	Median, across common-support quote rows, of 10,000 times the vehicle-route output advantage over the direct route.
$\text{Pr}(\Delta \text{Cost}_{ijkqt} > 0)$	<code>vehicle_beats_direct_share</code>	candidate vehicle token x day	Share of common-support quote rows for which the vehicle route gives higher output than the direct route.
$\text{Pr}(T_{ijqt})$	<code>thin_direct_share</code>	candidate vehicle token x day	Share of quote rows with an executable direct route whose direct output is below 90 percent of notional.
<i>Panel E. Stress and dynamic variables</i>			
Stress_t	<code>stress_downside</code>	day	Positive part of the negative daily log return in the WETH price.
$1\{\text{Stress}_t \geq 0.08\}$	<code>stress_event_8pct</code>	day	Indicator that downside WETH stress is at least 8 percent on day t.
$\text{BridgeShare}_{k,t+7}$	<code>future_bridge_share_t7</code>	candidate vehicle token x day	BridgeShare for token k seven calendar days after t.
$\Delta_7 \text{BridgeShare}_{k,t}$	<code>delta_bridge_share_t7</code>	candidate vehicle token x day	BridgeShare at t+7 minus BridgeShare at t.
<i>Panel F. V_4 settlement implementation measures</i>			
$\text{Pr}(\text{Transfer}_{k,r} = 1)$	<code>settlement_transfer_incidence</code>	candidate vehicle token x week	Mean receipt-level indicator that a matched route unit contains an ERC-20 Transfer log for the intermediate vehicle token.
$N_{k,t}^{\text{receipt}}$	<code>settlement_receipt_count</code>	candidate vehicle token x week	Number of receipt-audited matched route units for vehicle k in week t.
